A unique new way to ensure that you won't run out of heating fuel!

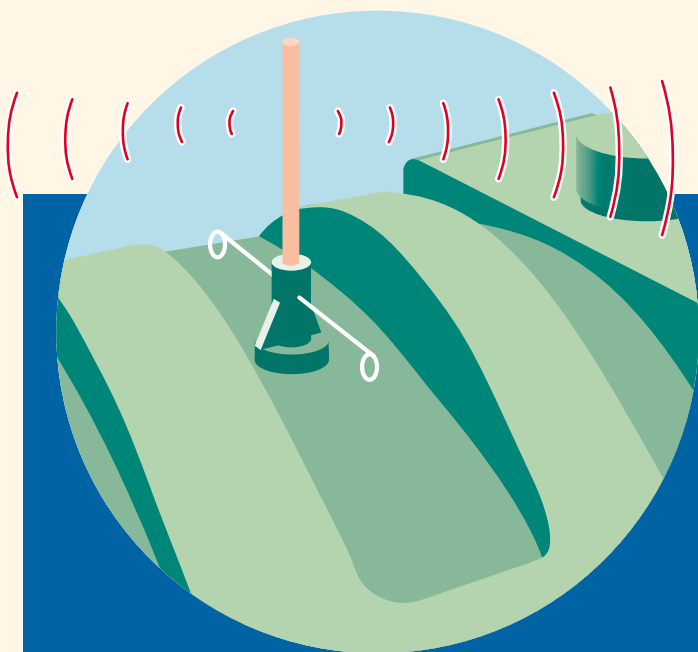

The complete electronic monitoring system that takes care of your heating fuel supply

**TANK**  
**Signal**  
**SYSTEM**

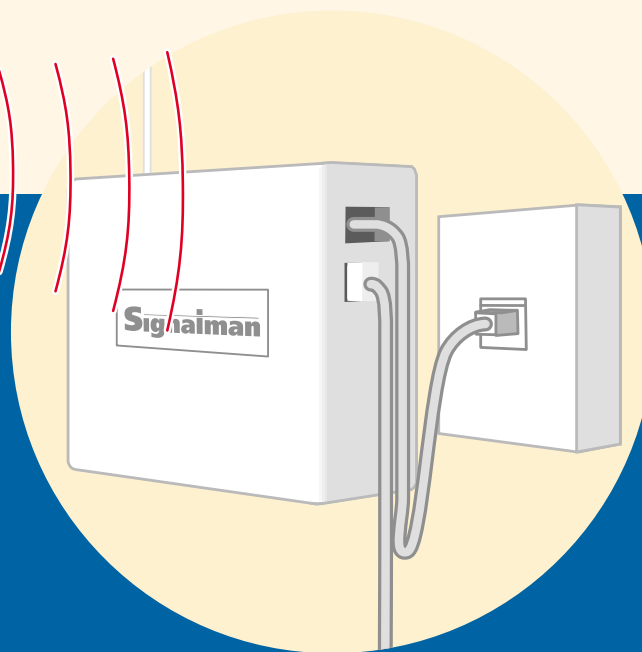

# An automatic monitoring system that gives you complete peace of mind about home comfort

The Tank Signal System regularly monitors the level in your heating fuel tank (steel or plastic) and sends the information to a Signalman in your premises.

The Signalman reports the level to your oil supplier so that he can arrange to top up your tank. No fuss, no delay – you don't have to do a thing.

**1** A probe is fitted inside your storage tank. Using new technology it senses the level of fuel and its small transmitter sends this information out by regular radio signals for a distance of up to 1,000 metres, right into your premises.

**2** Your Signalman shares your phone or fax line. It receives the signals and, when the line is not in use, reports the level in your storage tank to a computer in your fuel supplier's offices.

**3** Now, for the first time, your supplier can check whether your fuel level is running low, and arrange a delivery to ensure you are always warm and comfortable – whatever the weather.

Sensor Systems are proud to support these trade organisations and to have received these awards and approvals:

PRODUCTS  
MILLENNIUM

**Environmental protection** Your Tank Signal System will allow deliveries to be made using the FullStop overfill alarm. This improves environmental protection by helping to prevent overspills.
